## Easy way to screen record pc

There are plenty of reasons to record your screen, whether you're using a Windows PC, Mac, phone, or tablet – you can make a video for YouTube, compose a software tutorial, or prepare a presentation for work. You might start by getting for a free screen recorder, and there are some excellent options around, but you might not realize that Windows already has its own build-in recording tool, hidden in the pre-installed Xbox app. You can also record the screen from a browser window without downloading and installing a large program. It all depends on what you record, the hardware you use, and how long you have. When you're done, you can either share the record as it is, or make a few adjustments using the free video editing software – trim the clip at length, add titles, or record a voiceover. The best screen recorder at the moment is: Adobe Captivate Is not free, but if you want to record on-screen images for use in YouTube presentations and videos, Adobe Captivate is the best tool for this. Not only can it capture images from the screen, but it also allows you to integrate PowerPoint slides and even add interactive questions to your audience. to record the screen in WindowsIt is well hidden, but Windows 10 has its own built-in screen recorder, intended for recording games. To find it, open the preinstalled Xbox app (type Xbox in the search box to find it), and then tap [Windows]+[G] on your keyboard and click Yes, this is a game. Click Start Recording, or tap [Windows]+[Alt]+[R] to start, and then use the same shortcut after you're done. Recorded videos will be saved to the Videos/Capture in MP4 format folder. To customize the recorder settings, sign in to the Xbox app and go to the game DVR options. You can't choose another destination folder for records, but you can choose a quality setting, decide whether or not to record audio, and set a maximum clip length. Unfortunately, not all Windows 10 devices can record images with the Game Bar. To use it, you'll need a video card to support one of the following encoders: Intel Quick Sync H.260Nvidia NVENCAMD VCEHow to record the screen on a MacRecording the screen of a Mac is much easier than a Windows PC. If you're using macOS Mojave, just press the Shift++5 keyboard shortcut and all controls for capturing video and still images from your desktop will appear. You can record the entire screen, section, or window, and then cut, save, or share Results. If you're using an older version of macOS, you can record the screen using Quicktime Player. Just open the app (which is installed by default)How to record the screen on AndroidAndroid 10 includes your own screen recorder, which you can find by opening the Settings menu and selecting About Phone. Tap the version number seven times, and then enter your unlock credentials when prompted. This will put your phone in developer mode, allowing you to test features are not yet completely finished. Return to system settings, tap Developer Options, and select Feature Flags. Find the flag settings\_screenrecord\_long\_press and switch to turn it on. You can now record the screen at any time by pressing the power button to bring the power menu, and then holding down the screenshot button until the screen recording options appear. If you're using Android Pie or earlier, you'll need a third-party screen recorder from the Google Play Store. Such apps are very popular, so there is no shortage of soddily made or simply the malicious ones available. If you want to record gameplay images, Google Play Games has a built-in screen recorder that will automatically start capturing images when you launch a game. For everything else, we recommend AZ Screen Recorder. It's easy to use and comes with handy features. The free version is excellent, but additional options are available for a small fee. Recording your iPhone or iPadscreenScreen registration on an iPhone or iPad is just as simple. Tap Settings, followed by Control Center and Customize Controls, and then tap the green plus icon next to Screen Recording. Load the app you want to record, and then swipe up from the bottom of the screen (or down from the top right if you're using an iPhone X or later or an iPad with iOS 12 or iPadOS. Press the Record button (one point in a circle) and a three-second countdown will begin. Once this is over, registration will begin. To end the recording, tap the time indicator at the top left of the screen and select Stop. Keep in mind that any notifications you receive during registration will also be captured. Check out our guide to the best free video converters June 5, 2020 2020\*4 min read Need to register your computer screen or phone? Learn to record on Mac, Windows PC, iPhone, and Android devices with step-by-step instructions. Almost every device - Mac, Windows PC, iPhone and Android - has a built-in way to record the screen, but each one is different. If you're an iPhone or Mac user, you've probably noticed that it's pretty easy to record the screen in just a few steps. Using a Windows PC, you may need to kick it out of the old-fashioned way and use something like PowerPoint. (Yes, indeed.) And God help anyone trying to screen the record on an older Android device that is not a developer. Whether you want to record on your screen on a mobile device or desktop, we're covering for you. Below are step-by-step instructions about recording the screen. built in these devices and operating systems are good options, but maybe you need to go beyond the basic screen record. If you are looking for additional functionality (maybe editing or more recording options), be sure to check out our post on the best screen recorders. to record the screen Simply put, a screen recording is when you record a video of what's going on on the device screen. There are a number of reasons why you may want to register You can use it to demonstrate your product works, to capture an error to share with your development or IT team, to teach a colleague to do something, to build personal connections with prospects, and to share feedback with someone. you can even use it to save yourself from writing a long email. When it comes to how to record your computer screen, you can use either a built-in screen recording feature or download an app or screen recording software tool. Most built-in screen recorders can: Record a video about what's happening on the Screen Record audio Save the video, either on your device or in the cloud Some screen recording software (such as the Chrome extension in Vidyard) goes on and lets you capture a video of yourself talking, displayed in a balloon next to the screen recording , so you can add a personal note to your explanation. To screen record on Mac If you're on macOS Mojave or higher, there's a built-in screen recording feature and it's as easy as pressing a hotkey. (This is why people like Macs.) Record native screen on Mac Press Command + Shift + 5 Select whether you want to capture the entire screen, window, or selection (otherwise, the entire screen will start automatically recording) When you're done, click Stop to end recording The recording will appear as a thumbnail in the lower-right corner of the screen, click it to choose where to save the QuickTime video screen recording to Mac Alternative , you can use QuickTime, which is native to all Macs: Open QuickTime Select File, then New Screen Recording Click the Red Record button To start to start, click the Record button again To save, click File, then Save Pro Tip: If you just need to save a screenshot to Mac, press Command + Shift + 4 and select the area you want to capture. record on the screen on the Windows screen the recording is not a built-in feature on a Windows PC, so it is on a Mac. The easiest way to record the screen in Windows is to use PowerPoint. Record Screen PowerPoint Open PowerPoint Click the Insert tab and select Record Screen Select the area you want to record — to select the entire screen, press the Windows key + Shift + F Click the Record button or press Windows + Shift + R To complete the recording, click Stop When it's over, you can save the recording as a video file (separate from the PowerPoint presentation) Record Windows 10 Screen (Xbox App) Microsoft preload the Xbox Game Bar on devices so you can record video games, but it works just as well for businesses. Type Xbox in the Windows search bar and open the Keep Windows + G app on your keyboard Click Yes, this is a game To get started, click Record or press Windows + Alt + R To end, click Stop Pro Tip: If you just need to take a screenshot on Windows 10, press Ctrl + PrntScrn, select the area you want to capture and release. let's Screen Record on iPhone Most iPhones have a native feature for recording the screen. Go to Settings, Control Center, Customize Controls, and tap + next to Screen Swipe up from the bottom edge of the screen (if you're using an iPhone X, swipe down from the upper-right corner of the screen) Long press the center recording button and tap Microphone to turn on audio recording After you've done this, you can tap Start Recording If you've previously turned on the microphone (or don't want to record audio) , simply tap the circle record button (there will be a three-second countdown before recording begins) Will a red record bar appear at the top of the screen when the recording starts, when you're done, tap that bar to bring the Stop screen record? Tap Stop to stop recording (or press Cancel to continue recording) You can find the record in the Photos Pro Tip app: If you just need to take a screenshot on your iPhone, hold down the iPhone main button and press the Power button on the side. If you have an iPhone X or later, hold down the Lock and Volume buttons up at the same time. To record screen on Android Screen Record on Android 11 or higher With Android 11 or higher, native screen recording is included as an option and can be found in the range of quick settings of the device. Go to Quick Settings (or search) Screen Recorder Tap the app to open Choose sound and video quality settings and click Finish For first recording, ask for permission to access your device, ask you to choose sound settings, and give you the option to cancel or start recording Press Record Start recording Press stop square button when you finish recording You can find the recording in the gallery or app Photo Screen recording on older Android devices If you are running an older version of Android, you may be able to record, but it takes some digging to find and activate. To allow on-screen recording, you'll need to turn on Android device developer mode. Go to Settings, About your phone and tap the Generate number button seven times, it will say: Now you're a developer! Return to Settings and select Advanced, Developer Options, then Feature Flags Switch to settings\_screenrecord\_long\_press Now you're set up to record the Screen Press The Screen Button and it will display a pop-up menu Tap Start Recording (a new pop-up will appear) Tap Start Now to finish, tap Stop Video will appear in the default Pro Tip photo gallery : If you just need to take a screenshot on Android, hold down the power button and the volume reduction button at the same time. If you need to go beyond the basic screen recording and are looking for the best screen for your business (free and paid), be sure to check out our post on the best screen recorders.
